

PreShot

Gain the Edge to Act First

PreShot allows preemptive detection and elimination of enemy snipers and observers. See them first, and eliminate them first.

The products on this data sheet are subject to the controls of the International Traffic in Arms Regulations (ITAR) and will require authorizations prior to export out of the U.S. or transfer to any foreign person.

Designed for:

- Detection of snipers before they shoot
- Small units on foot, scout/sniper teams, mobile patrols, or fixed positions
- Restrictive urban terrain or open field – anywhere snipers may be concealed

Key Advantages:

- Simple to operate
- Wide field of view allows targets to be found easily
- Suspected targets appear as bright flashing dots
- > 500 meter detection of rifle scopes
- Lightweight (3 lbs. total system weight)
- Start-up in seconds
- Low cost

Other Features and Specifications

- Tape switch to activate scan mode (instant on)
- Power on and low battery LEDs
- Uses readily available CR123 batteries
- Battery life @20°C (68°F): 3.5 hours w/ scan on, 10 hour stand-by
- Operates in temperatures from -20°C to 50°C (-4°F to 122°F)
- Environmentally sealed
- Weapon mounted, compatible with common rail systems; tripod or handheld mounts also available
- Does not interfere with standard sights or other illuminators
